FNE Enterprises specialises in SmartPhone Apps for active outdoor activities especially Orienteering and Hiking.

The most popular App is MyOMaps for Android devices.

MyOMaps lets you load your Orienteering Map and Course into a SmartPhone and use the GPS capability of the device to:

- "punch" when you get to a control site,
- record your track, and
- create a results (split) file.

It also lets you create a geo-referenced map from a photo or image file to use as your orienteering map.
